Summary

React JS Developer with 5+ years of experience building and modernizing enterprise web applications using React 18, Redux, and TypeScript. Proven expertise in legacy system migration, performance optimization, role-based UI workflows, and scalable component architecture. Experienced in Agile delivery, stakeholder collaboration, and production-grade frontend solutions across automotive and aerospace domains.

Skills

Frameworks & Libraries

- ReactJS
- Redux Toolkit
- Material-UI

Languages

- JavaScript (ES6+)
- TypeScript
- HTML5
- CSS, Tailwind CSS

Testing

- Jest
- Enzyme

Tools & DevOps:

- Git/Bitbucket
- Jira
- Postman

Additional Exposure:

- Tableau
- Informatica
- MS Office

Educational Background

Btech

Vishnu Institute of Technology

Aug 2015 - May 2019

- ECE - 78.9%

Intermediate

Aditya Junior College

Jun 2013 - April 2015

- MPC - 97.6%

Certifications

- **Udacity Full Stack Nanodegree** – Developed AWS-hosted e-commerce application using Flask, PostgreSQL, and Google Authentication.
- **Microsoft Certified:** Azure Data Fundamentals
- **Sectorthon 2020 (Capgemini):** Diamond Star & Certificate of Recognition
- Certifications in **Data Visualization with Tableau, Python for Data Science & AI, Text Retrieval & Search Engines, Gremlin & Neo4J**

Work Experience

Tata Consultancy Services – Systems Engineer

DTFS – Volumetric Incentive Program (Aug 2025 - Present)

- Re-engineered legacy incentive workflow screens into a modern React 18–based enterprise interface as part of DTFS mainframe modernisation, implementing both existing behaviour and newly introduced business requirements.
- Implemented Redux-driven state management and optimised rendering performance using Memoization and custom reusable hooks to efficiently handle complex, data-intensive workflows.
- Consumed backend services to enforce dynamic role-based UI behaviour, including conditional visibility of actions, controls, and workflow transitions entirely within the frontend layer.
- Independently delivered French language localization across Milestones M3–M7, enabling multilingual user experience aligned with regional business requirements.

DTNA – IBM Portlet to FOSS Migration (Jan 2025 - Aug 2025)

- As part of customer's cloud readiness initiative – Proposed and modernized 14 legacy IBM Portal MVC–Portlet into lightweight, scalable web applications.
- Migrating the legacy frontend from JavaScript/jQuery to React 18, enhancing performance, maintainability, and scalability.
- Partnered closely with business teams to gather, refine, and prioritize requirements. Translated business workflows into functional requirements and user-friendly application flows.
- Coordinated task planning and execution using JIRA ensuring timely delivery across multiple workstreams.
- Acted as a bridge between business stakeholders and development teams to clarify scope and manage dependencies.

Tapestry Solutions - A Boeing Company (Oct 2023 – Dec 2024)

- Developed a standalone application, implementing a map module with Leaflet for IoT device tracking and floorplan mapping.
- Created floorplans with interactive maps incorporating latitude and longitude data.
- Enabled floorplan mapping, device configuration, edits, deletions, and real-time status reporting for RFID readers and devices.
- Performed CRUD operations across related screens, assigning triggers, alerts, notifications throughout the modules.
- Utilized redux to manage and maintain complex application states efficiently.

Capgemini Private Ltd – Associate Consultant

IDEA by Capgemini (Dec 2020 – Oct 2022)

- Developed reusable layout components and enterprise UI modules using React, Redux and Material-UI.
- Designed multi-step dynamic forms with advanced validation logic and role-based access control mechanisms.
- Collaborated with business stakeholders to translate functional requirements into intuitive user workflows.
- Built interactive dashboards and visualizations using Highcharts for data-driven insights.
- Wrote unit tests using Jest and Enzyme to improve reliability and test coverage.
- Performed root cause analysis on production defects and improved code quality.

KIS - Knowledge Insights and Services (April 2020 - Nov2020)

- Worked on UI Customization using HTML, JS, CSS and NLTK library to perform Text tokenization, stemming.
- Responsible to perform Text vectorization techniques like BoW vectorization, tf-idf vectorization transform natural language (text) into numeric feature vectors.
- Involved in using Elastic Search engine to perform transformation of the incoming data.
- Responsible for tagging documents with a dynamically calculating one or more attributes based on document contents, both structurally and content-wise and providing high relevance score using python.
